OceanX AI

Intern Automation Assignment + Agent System

Confidential | May 2026

1. BUSINESS OVERVIEW

We run a **trade finance + logistics** business:

Step	Action	Example
Buy	Purchase goods from supplier	\$10,000

Sell	Sell to customer at margin	\$12,000
Manage	Finance, logistics, collections	End-to-end

GOAL: Automate everything except two human checkpoints:

1. Customer meeting (sales + relationship)
2. Supplier payment approval (capital control)

Everything else should be handled by agents.

2. CORE SYSTEM STACK

You **MUST** use or simulate these tools in your demo:

Function	Tool
Inventory Management	CIN7
Accounting	Xero (Consolidation via Joiin)
Payments - Direct Debit	GoCardless
Payments - Transfers	Wise
CRM / Meetings	HubSpot
Lead Enrichment	Apollo
Cold Email	Instantly
LinkedIn Outreach	Dripify

Additional Notes:

- Warehouses use different WMS - all connected to CIN7
- You may use Base44, ChatGPT, Claude, OpenClaw, NemoClaw, or any stack

3. FULL WORKFLOW (END-TO-END)

Step	Details
Step 1 - Customer Acquisition	Cold email (Instantly), LinkedIn (Dripify), Apollo enrichment, Trade shows, Round tables, Corporate finance brokers, Channel partners, Digital ads Output: Qualified lead → Meeting booked in HubSpot
Step 2 - HUMAN CHECKPOINT (Meeting)	• Understand customer • Confirm requirements • Approve moving forward
Step 3 - Underwriting	• Credit check • Bank data / financials • Risk scoring • Set credit limit
Step 4 - Customer Order + Contract	• Customer places order • Generate contract • Send via DocuSign • Get signed contract
Step 5 - Operations (Automated Core)	From supplier invoice: Create products → CIN7, Create PO → CIN7, Create invoice → Xero, Create bill → Xero, Generate sales contract
Step 6 - Payment Structure (HUMAN CHECKPOINT)	• Collect ~30% upfront • Approve supplier payment (Human) • Pay supplier via Wise
Step 7 - Logistics	• Ship goods via API or RFQ • Track shipment • Update status in real time
Step 8 - Warehousing + Inventory	• Goods arrive at warehouse • Sync WMS → CIN7 • Track inventory levels
Step 9 - Collections	Model 1 - Open Credit: GoCardless direct debit → Weekly payments Model 2 - Stock & Release: Customer draws goods → Pays per release

4. AGENT ARCHITECTURE (IDEAL SYSTEM)

#	Agent	Role
---	-------	------

1	Master Supervisor Agent	Oversees all agents, checks outputs, flags errors
2	Customer Acquisition Agents	Allocates leads to channels (Cold Email, LinkedIn, Apollo, Ads, Events, Broker/Partner)
3	Underwriting Agent	Pulls financial data, scores risk, suggests credit limit
4	Contract + Structuring Agent	Generates pricing, creates contract, sends via DocuSign
5	Operations Agent	Creates products (CIN7), PO (CIN7), invoice (Xero), bill (Xero)
6	Payment Agent	Triggers GoCardless, tracks collections, reconciles in Xero
7	Logistics Agent	Tracks shipments, updates milestones
8	Inventory Agent	Syncs WMS → CIN7, tracks stock
9	Collections Agent	Monitors payments, escalates delays

5. API KEYS / SANDBOX / DEMO RULES

You do NOT need live API keys.

Option	Description
Option 1 - Prototype Demo	Build a front-end or workflow prototype
Option 2 - Mock API Demo	Use mock JSON responses and simulated actions
Option 3 - Sandbox / Dev Accounts	Use sandbox, trial, or developer environments
Option 4 - Partial Real Integration	Connect one real system and simulate the rest

Shortlisted finalists will be given supervised sandbox credentials later.

6. YOUR ASSIGNMENT

Build a working demo automating ONE of the following:

Assignment Option
Lead generation + outreach agent
Underwriting agent
Contract generation system
Invoice creation (Xero-ready)
CIN7 product + PO automation
Shipment tracking dashboard
Inventory sync system
Direct debit automation (GoCardless)
Multi-step mini-agent (2-3 steps combined)

What We Are Looking For

Criteria	Description
Clear thinking	Structured problem breakdown
Practical execution	Working demo, not just theory
Use of tools	Integration with real or simulated systems
Agent-based design	Autonomous decision-making architecture
Scalability	How this extends to full autonomy

BONUS: Show how your system connects to APIs, handles errors, and can scale into a full multi-agent system.

7. DELIVERABLE

- **Live demo**
- Simple explanation of logic
- Show inputs → outputs

8. DEMO SESSION

Book your demo slot:
<https://luma.com/Oceanxai-demo>
Demo times: Monday, May 11 - 9:00 AM or 9:00 PM Singapore time (SGT)
Format: Group session (1 hour)

We are not looking for perfection - we are looking for clarity, speed, and thinking.

9. RESOURCES

Resource	Link
Product Overview	DocSend - Product Overview
Underwriting Document	Google Docs - Underwriting

10. EVALUATION FRAMEWORK

#	Criteria	Score (1-5)
1	Clarity of thinking	
2	Practical usefulness	
3	Automation depth	
4	Tool usage	
5	Scalability to full system	

11. KEY PRINCIPLE

If this system works:

Humans only do **relationships + capital decisions**

Agents run **everything else**

That is the goal.

OceanX AI | Driving Trade

OceanX AI is a trusted source for
founders to get the funding they need for growth.
Providing SMEs the power of cross-border trade financing
